

Platelet-Rich Plasma also known as the Priapus Shot® or P-Shot® is a new non-pharmaceutical treatment for erectile dysfunction.

If you are looking for a way to rejuvenate your sex life, the Priapus Shot® is a safe, non-pharmaceutical way to treat and potentially reverse the root cause of erectile dysfunction with benefits lasting from 12 up to 18 months. The growth factors in the activated platelet-rich plasma promote a healing response that rebuilds, rejuvenates, and revitalizes the penis. Thus improving your sex life, self-image, and relationships.

If you suffer from any of the following conditions, you may be a candidate for the Priapus Shot®:

- Decreased sensation and pleasure
- Inability to achieve or maintain firmness during intercourse
- Difficulty maintaining firmness until your partner is satisfied
- A decrease in size (often seen with normal aging)
- Peyronie's Disease - causing an angle that causes pain or inability to have intercourse
- Family relations strained because of any of the above issues

Your doctor or nurse will help you determine if this procedure could work for you. Men both on and off testosterone replacement, those with diabetes, young and old, can often benefit from the Priapus Shot® procedure. The procedure could lead to lower doses of erectile medications, but may not always allow discontinuation. Smokers may see lower results.

Ask your physician about The Priapus Shot® treatment today.

PEYRONIE'S DISEASE

Research has shown the Priapus Shot® often leads to a dramatic improvement to the penis, including a straighter and firmer erection. The Priapus Shot® procedure uses science shown by research to decrease inflammation, increase circulation, and remodel scar tissue. Results can vary from person to person; no procedure works for all people.

Potential Benefits of the Priapus Shot®

- Improved relations and stronger family
- Better, healthier sex
- Fast and relatively painless
- No recovery time
- Achieve full results in 2-3 months and lasting from 12 up to 18 months
- Larger girth and length
- Increase desire
- Increased sensation and pleasure
- Increased circulation for a healthier organ
- Enjoy sexual relations the day of the procedure
- No allergic reactions
- Drug-free
- Non-surgical

The Procedure

The overall non-surgical process is quick and usually painless. The entire process takes about 30 minutes.

1. Numbing of the penis with a numbing cream, as well as a lidocaine block.
2. A simple blood draw from the arm.
3. Using an FDA-approved proprietary technique, we extract the platelet-rich plasma.
4. Your platelet-rich plasma is injected in the shaft and into the head of the penis.
